

Anantharaman Durairaju

Senior Software Engineer

(SRE / Cloud Engineering / Test Automation)

Cell No: (415) 629-6149

Email: ananthusworld@gmail.com

Location: Cumming, GA, USA

Professional Summary

- Over 20 years of experience in the IT industry, serving as a **Senior Software Engineer** with deep expertise in translating business requirements into scalable, secure, and well-engineered cloud application solutions on **Google Cloud Platform (GCP)**.
- Core focus areas include **Site Reliability Engineering (SRE)** and **Test Automation**.
- **Lead observability initiatives, identifying gaps** and driving maturity through enhanced logging, metrics, tracing, dashboards, and actionable alerting.
- Develop strategies for **SLIs, SLOs, and Error Budgets** for critical services, ensuring measurable and consistent reliability outcomes.
- Design and implement **automation solutions to reduce operational toil**, increase system resilience, and improve overall engineering efficiency.
- Implement and manage key **SRE tools and automation frameworks**, including CI/CD pipelines, Infrastructure-as-Code modules, automated incident remediation, and chaos engineering platforms.
- **Evaluate, prototype, and recommend emerging technologies, tools, and methodologies** to drive improvements in service reliability, developer productivity, and operational efficiency.
- Contribute to **shift-left reliability**, ensuring reliability principles and operational considerations are embedded early during service and feature development.
- Participate in **blameless postmortems**, driving identification of root causes and ensuring systemic architectural improvements are prioritized and implemented.
- Implement and advocate for **resilience patterns** such as circuit breakers, rate limiting, graceful degradation, and chaos experimentation across applications and infrastructure.
- Strong experience in **Web, Mobile, and API automation**, as well as **manual testing** across various platforms.
- Proficient with automation frameworks such as **Appium, Selenium with Java, TestNG, JUnit, Cucumber, Allure**; build tools **ANT, Maven**; version control systems **SVN, Git**; and CI tools such as **Jenkins**.
- Expertise in **creating test strategies, framework design documents, and detailed automation test results**.
- Extensive experience in **requirement analysis, test estimation, team management, automation feasibility analysis, automation framework design, and execution**.
- Familiar with **Web Services (SOAP & REST)**, **SoapUI, XML**, and validating request/response payloads.
- Skilled in **bug reporting, prioritization, and cross-functional communication**, working closely with development and QA teams to ensure timely resolution of critical defects.
- **Collaborate with internal stakeholders** to determine efficient, scalable, and cost-effective technical solutions to meet business requirements, including design, development, testing, installation, and deployment.
- Work closely with **Software Engineers, Technical Leads, and Management** in a highly collaborative and cross-functional environment.

Work Experience

- **USA:**
 - Currently working as a Senior Software Engineer in **Macys Technology**
 - Technical Test Lead in **Apple Inc** through **Infosys Ltd**
- **India:**
 - Assistant Project Manager in **Zylog Systems Limited**
 - Programmer Analyst in **Cognizant Technology Solutions**
 - Test Engineer in **Forte Solutions Pvt. Ltd**

Technical Skills

Operating Systems:	iMac, Windows, MS-DOS, UNIX, iOS, Android
Programming Language:	Java, Java Script, Python, SQL
Databases:	MySQL, SQL Server, Oracle, MongoDB, DB2, Spanner DB
Public Cloud Service:	Amazon Web Services (AWS), Microsoft Azure, and Google Cloud (GCP)
Monitor & Observability:	Google Monitoring, Dynatrace, FullStory, Splunk, SentinalOne, Dynatrace, Firebase
IaC & Automation:	Terraform, Ansible, Jenkins, Kubernetes
Incident Mgt & Alerting:	StatusPage, Moogsoft, Google Alert, Splunk, SentinalOne
Version Control & CI Tools:	SVN, Git & Jenkins
IDE Tools:	IntelliJ IDEA, Xcode, Android Studio, Visual Studio Code
Automation Frameworks:	Junit, TestNG, Report NG, Allure, Cucumber, JaCoCo and Java Step Definitions
Automation Testing Tools:	Playwright, Selenium, Appium, Raft Code, QTP, RFT, NeoLoad, SandStrom
Project Management:	JIRA, VersionOne, Radar
Build Tools:	Ant, Maven
Data Visualization Tools:	Tableau, Power BI, Looker Studio
Office & Communication:	MS Office, MS Teams, Zoom, Google Meet, Slack, GoTo Meeting
API Platform:	Postman, SoapUI

Certifications

- Google Cloud - **Professional Cloud Architect Certification**
- LinkedIn - **Site Reliability Engineering Essential Training**
- Louisiana State University - **Introduction to DevOps**
- IBM Certified Solution Designer - **Rational Functional Tester** for Java
- **ISO 9001:2008 Internal Auditor** Training Course
- HP – **Quick Test Professional & Quality Center**.
- Cognizant – **Software Testing, Manufacturing Logistics** and **CSQA certification**.

Educational Qualification

- Completed M.C.A (Master of Computer Application) degree from SASTRA University, India.

Projects Experience

Project Names: Macys.com / Bloomingdales.com – Site Reliability Engineering (SRE)

July 23 – Present

Role: Senior Software Engineer

Organization: Macys Technology

Technology Environment: Java, REST Services, Google Cloud, Personalization Engine, Adobe Experience Platform, Google Cloud Retail Search, Visual Search, Augmented Reality (AR), Mobile Payments

Tools: Google Cloud (GCP), Dynatrace, FullStory, Splunk, SentinalOne, Firebase, Terraform, Ansible, Jenkins, Kubernetes, StatusPage, Moogsoft

Project Description

Macys.com & Bloomingdales.com are America's largest online fashion retailer and department store.

Roles and Responsibilities:

- Recommending service level objectives in partnership with other teams
- Acts as an escalation POC during incidents
- Collaborating with dev to troubleshoot systems and app performance issues
- Gains deep understanding and improves the CI/CD/deployment framework
- Champions shared services and platforms to drive reliability
- Delivery of resilient application stacks via "Infrastructure as Code" and other DevOps practices
- Monitoring and on-going support of critical, high revenue business applications
- Diagnosis and resolution of complex system and application issues
- Working with diverse technical and non-technical teams, including Development, QA, IT Operations, Customer Operations and Project Management teams
- Write and maintain systems / application documentation for technical and non-technical

Project Names: Macys.com / Bloomingdales.com – Digital Support (DSV, Preview, Automation)

Jun 18 – June 23

Role: Senior Software Engineer

Organization: Macys Technology

Technology Environment: Java, SDT Framework, SOAP, REST Services, JSON, XML Request, SQL, Maven, Git

Tools: Selenium Web Driver, XPath, Cucumber Feature File, Java Step Definitions, Junit/TestNG, Appium, Jenkins

Project Description

Macys.com & Bloomingdales.com are America's largest online fashion retailer and department store.

Roles and Responsibilities:

- Performed Daily Site & Preview Test for all channels – Desktop Browser, MEW & Mobile Native App's
- Gather, analyze requirements; design, implement, unit test automation code in Java framework.
- Participate in the full SDLC, iterative development; estimate the QE/ automation work on projects.
- Develop feature files, test scripts for automation and prepare test reports.
- Facilitate defect triage process and help in resolving release/project issues.
- Participate in technical discussions within QE team as well as with other groups associated with assigned projects; collaborate with the users/customers of the automation framework.
- Worked on additional automation tasks and responsibilities as assigned that will contribute towards team, department, and company goals.
- Participate and drive the decision-making process on the automation design and development front.

- Demonstrate Agile Kanban style approach with analysis and testing, automation development while handling priority on multiple support tickets and enhancements requests.
- Consistently demonstrates regular, dependable attendance & punctuality.

Project Name: Concierge, Radar 8.0, DreamCatcher & iLog

Jul 13 – May 18

Role: Technical Test Lead

Client: Apple

Technology Environment: Java, ETSQA Framework, Keyword-Driven Framework, Custom Framework for Data Sync Test

Tools: Selenium 3.0, Appium, Raft Code, Jenkins, RADAR, JaCoCo

Project Description

Concierge, Radar 8.0, DreamCatcher & iLog are the Apple proprietary applications used by Apple for their internal purposes

- **Concierge** – iOS mobile App and it is used to create the reservation for the different of services for Apple Customer
- **Radar 8.0** – Bug Tracking and Requirement Management Application
- **DreamCatcher** – Service life-cycle management platform for SSP which includes a wizard-based application on-boarding tool
- **iLog** – Call/E-Mail support application for their products. Consumer Problem handling COCOA Framework based Application

Roles and Responsibilities:

- Created the Automation Framework, Identify the Test Scenarios and Created and reviewed the Test Scripts using RaftCode & Selenium
- Created a Java based custom framework for validating large data volume b/w Oracle and MongoDB after migration suite invocation. Designed solution was extendable to tables by configuration changes.
- Created, Executed, Debugged and Analyzed the Automation test scripts using Appium
- Executed the test scripts through Jenkins/Terminal/Eclipse/RaftCode and resolved the application element and scripts related issues
- Involved Release Certification Testing and Identify the Test Scenarios for automation testing
- Setup the Testing Tools, Application environment and Automation Framework
- Raising the radars against the Application wherever whenever applicable

Product Name: WFMS, Field Power Product

Nov 10 – Jun 13

Role: Assistant Project Manager

Client: Altisource, BestBuy, STC, Benco, SingTel

Technology Environment: .Net, MS SQL DB, IIS

Tools: NeoLoad

Product Description

Field power product development by Zylog Systems limited. Field Power product enables the user to schedule and track work order information of Field Engineers (Work Force Management System), Based on the customer need, customized version providing to clients (Altisource, BestBuy, STC, Benco, SingTel)

Roles and Responsibilities:

- Worked closely with customers and developers to collect the performance requirements.
- Developed the test plans and test cases (workflows) for performance testing.
- Involved in preparation of Project Management plan

- Prepared Workload Mixture, Test Plan and Test Summary Report
- Arrived the Project Effort Estimation
- Reviewed the Test Scripts and Test Results
- Involve in setup the test environment
- Involve in monitoring the system resources
- Managed the overall project risk and process

Product Name: Mobile Banking System, Bank Muscat, Oman

Nov 11 – Apr 12

Role: Project Leader

Client: Bank Muscat

Technology Environment: Java, Oracle DB, Weblogic

Tool: Sandstorm

Project Description

Bank Muscat's Mobile Banking initiative is aimed at providing customers seamless connectivity to the Bank through Mobile Banking. The Mobile Banking System requires performance testing to ensure that the Mobile Users experience is the best. The objective of this Performance Testing was to validate the Performance of the Mobile Banking System in Android, Blackberry, iPhone and J2ME devices for 250 to 1000 concurrent users.

Roles and Responsibilities:

- Worked closely with customers and developers to collect the performance requirements.
- Developed the test plans and test cases (workflows) for performance testing for the CalWin.
- Developed AES logic API Scripts for Standstorm DRM and enhanced for global usage.
- Estimated the baselines for the performance testing, design, and implementation of high-performance and correctness test framework.
- Execution of Smoke tests to validate Scripts, test environment setup and monitoring tools/scripts
- Involve in setup the test environment
- Involve in monitoring the system resources
- Involve in Load test executions
- Presented the Test Summary Report with the Customer
- Managed the overall project risk and process

Project Name: CalWIN

May 12 – Jun 13

Role: Assistant Project Manager

Client: CalWIN USA

Technology Environment: Java, Oracle ADF, Weblogic

Performance Testing Tool: HP-Loadrunner

Automation Testing Tool: HP-QTP

Project Description

CalWIN (Cal WORKS Information Network) is an on-line, real-time system that supports all the major processing functions necessary to administer California's public assistance programs. The system provides for the automated determination of eligibility for public assistance programs and the delivery of program benefits. It is a technology migration project that converts the current PowerBuilder application to Web application of Java and Oracle ADF.

Roles and Responsibilities:

- Requirement Analysis and Document study.
- Involved in preparation of Project Management plan.

- Preparation of Test Plan.
- Done Effort Estimation.
- Involved in designing Automation framework.
- Preparing Review reports.
- Conducting Defect Review.
- Organized weekly status meeting and provide detailed status report.

Product Name: Silvanus³⁶⁰

Nov 10 – Aug 11

Role: Project Leader

Technology Environment: .Net, SQL Server, Silverlight

Automation Testing Tool: HP-QTP

Project Description

Silvanus³⁶⁰ offers waste management software, reverse logistics software for recyclers, manufacturers, and Retailers. Silvanus³⁶⁰ from ZSL Inc is a suite of configurable applications for recyclers, collectors, and handlers that is fully compatible with the EcoGrid³⁶⁰ community network for manufacturers, retail dealers, government agencies, and buyers. Comprehensive functions in Silvanus360 facilitate back-office productivity, user task list workflow, and integrated transactions between partners.

Roles and Responsibilities:

- Requirement Analysis and Document study
- Involved in preparation of Project Management plan
- Prepared the effort estimation and Test Plan
- Implementing organization level process
- Identified and reviewed the Automation framework
- Review of work products/deliverables
- Preparing Review reports
- Managed the overall project risk and process

Bright House

Jan 10 – Sep 10

Technology Environment: J2EE, Oracle 10g, Apache Tomcat

Testing: Regression – Automation

Tool: HP-QTP

Role: Test Lead

Project Description

Bright House stores for the purpose of managing our in-store operations, the handling of customer payments and reporting. Bright House stores have 3 functional requirements. **Daily Activities describes** encompasses most of the daily functional requirements and includes the management of customers, the creation and maintenance of agreements, and the handling of customer payments. **Operations Activities** covers much of the back-office functionality including the management of store rental assets, receiving deliveries, product service and maintenance, inter-store transfer of assets, etc. **Day End** application closes off the day's business. All the daily transactional and operational data is processed, the results of which are presented in a suite of printed reports that are used to measure performance and reconciliation and are subsequently stored for auditing purposes.

Roles and Responsibilities:

- Requirement Analysis and Document study
- Involved in preparation of Project Management plan

- Preparation of Test Plan
- Done Effort Estimation
- Involved in designing Automation framework
- Preparing Review reports
- Conducting Defect Review

Telecommunication Expense Management [Telesoft]

May 09 – Dec 09

Project Description

3M implementing Telecommunication Expense Management (TEM) software. That allow the company to reduce telecom expenses by include Invoice Processing, Call accounting, Asset Management, Vendor Provisioning, bonding, and Wireless device plan management. Telesoft is an award-winning product and services have revolutionized the way companies do business in today's marketplace.

Roles and Responsibilities:

Prepared automation estimation

- Identifying the automation framework, created and executed the automation test scripts using Rational Functional Tester
- Prepared the requirement traceability matrix
- Involved in defect management
- Manage the automation test team
- Prepared status reporting

PeopleSoft HRMS

Nov 08 – Jan 09

Project Description

3M setup the PeopleSoft HRMS Application Globally. It replaces the core HR activities by streamlining them electronically; The HRMS technology can convert these into web based HRMS components of the ERP system and permit to reduce transaction costs, leading to greater HR and organizational efficiency. Through Recruiting, Compensation, Manager Self Service, Employee Self Service, and HR Admin Modules.

Responsibilities:

- Involved in editing the framework design based on the requirement test scripts creation and execution using Rational Robot.
- Involved in status report and defect management.
- Analyzed the application in the script maintenance phase and updated the test data based on the script.
- Prepared EOTR- End of Test report.

Enterprise One Application

June 08 – Nov 08

Project Description

Enterprise One project aims at providing quality assurance services to 3M Central Quality Group for validation of Enterprise One set-up for their global rollout. The various modules related that are part of E1m application are Sourcing, Order Management, Planning, Advance warehousing, Shop floor control, inventory, Product Data management, etc., The robust testing process for Enterprise One involves identifying, scripting, and testing their various business scenarios.

Responsibilities:

- Involved in editing the framework design based on the requirement test scripts creation and execution using Rational Robot.
- Involved in status report and defect management.

- Analyzed the application in the script maintenance phase and updated the test data based on the script.

RMS Taleo Integration

Jul 06 – May 08

Project Description

3M implementing a new Recruiting Management System that integrates Talent Management. Talent Management automates and analyzes the recruiting and hiring process. Managers at the leading organizations rely on the Talent Management to align talent with business objectives, which significantly reduces process costs, improves quality of hire, reducing risk and achieving higher level of performance.

Taleo is the Recruiting Management System. This application connects the candidates to jobs and automates the recruiting and hiring processes. Taleo integrates talent management from powering multiple career sites and optimize the boarding process. It enables you to quickly identify, hire, and retain top talent so you can drive business performance.

Responsibilities:

- Involved in Requirement Analyze, Estimation preparation, RTM (Requirements Tractability matrices) preparation,
- Created and executed the test cases,
- Perform the Defect in Lotus Notes and re-test the defects and status reporting
